SUMMARY

Aspiring Software Engineer Integrated M.Tech graduate at VIT Vellore (CGPA 8.35) who likes making software fast and reliable. I've built and load-tested three Java/Spring Boot services where I tracked latency, throughput and failure behavior, and I enjoy digging into why something is slow and then fixing it. I want to bring that to live-service mobile games at EA Slingshot Studios, where load times and frame rates shape how players feel.

TECHNICAL SKILLS

- **Languages:** Java 17 (primary), Python, SQL, JavaScript
- **Core CS:** Data Structures and Algorithms, OOP, Operating Systems, Computer Networks, DBMS, Low-Level Design
- **Problem solving:** 100+ problems solved on LeetCode
- **APIs and backend:** REST API design, Spring Boot 3, Spring Security, Spring Data JPA, Microservices, Apache Kafka
- **Performance and caching:** Redis, PostgreSQL indexing and query tuning, JMeter load testing, Prometheus, Grafana
- **Tools:** Git, GitHub Actions, Docker, Maven, JUnit 5, Mockito, Postman
- **AI-assisted development:** Claude Code, GitHub Copilot, Cursor, plus

PROJECTS

StreamRate: Distributed API Gateway with Rate Limiting github.com/Harika056/streamrate
Java 17, Spring Boot 3, Spring Cloud Gateway, Redis, Lua, JWT, Prometheus, Grafana, Docker

- Built a Redis-backed token bucket rate limiter in atomic Lua scripts so per-API-key quotas stay consistent across 3 gateway instances.
- Handled about 1,200 requests/sec at p95 latency under 45 ms in JMeter tests on a 2-core container; over-quota requests get HTTP 429 with a Retry-After header.
- Added Micrometer, Prometheus and Grafana dashboards for throughput, rejection rate and p95/p99 latency per route, which is how I spotted and fixed slow paths.

BankLite: Transactional Banking Service github.com/Harika056/Banklite
Java 17, Spring Boot 3, Spring Data JPA, PostgreSQL, Redis, JUnit 5, Docker

- Built fund transfers with @Transactional and optimistic locking; no double-spends across 500 concurrent transfer requests in JMeter tests.
- Cached account-balance reads in Redis with write-through invalidation, cutting average read latency from about 90 ms to 12 ms and database hits by about 70%.
- Wrote 40+ JUnit 5 and Mockito tests (about 85% line coverage), including insufficient-funds and concurrent-modification cases.

OrderHub: Event-Driven E-Commerce Microservices github.com/Harika056/orderhub
Java 17, Spring Boot 3, Spring Cloud, Eureka, Kafka, PostgreSQL, Redis, Resilience4j, Docker Compose

- Split the system into 4 independently deployable services (Order, Inventory, Payment, Notification) behind Spring Cloud Gateway with Eureka discovery.
- Moved order processing to Kafka events, so order placement returns in about 120 ms instead of about 600 ms.
- Added circuit breakers and retry with exponential backoff, so orders kept flowing during simulated Inventory outages instead of failing in a cascade.

EDUCATION

Integrated M.Tech, Software Engineering, Vellore Institute of Technology, Vellore | 2021 to Aug 2026 | CGPA 8.35/10
Class XII, Sri Chaitanya Junior College, Piduguralla | 2021 | 95%
Class X, Scholars High School, Piduguralla | 2019 | CGPA 10.0/10

CERTIFICATIONS

- Microsoft Certified: Azure AI Fundamentals (AI-900)
- HackerRank SQL (Intermediate)
- Java Programming: Arrays, Lists and Structured Data (Coursera)
- Exploratory Data Analysis (Infosys Springboard)
